Designation: C1634 – 11

Standard Specification for
Concrete Facing Brick

This standard is issued under the fixed designation C1634; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope
1.1 This specification covers solid, dry-cast, concrete facing brick intended for interior and exterior use in constructing structural and facing masonry components and are made from portland cement, water, and suitable mineral aggregates with or without the inclusion of other materials.

Note 1—Specification C55 addresses concrete building brick used in non-facing, utilitarian applications (previously referred to in earlier editions of Specification C55 as Grade S—for general use where moderate strength and resistance to frost action and moisture penetration are required). This specification differs from Specification C55 in that it includes expanded consideration for properties of concrete brick used in facing applications and other exposure conditions (previously referred to in earlier editions of Specification C55 as Grade N—for use as architectural veneer and facing units in exterior walls and for use where high strength and resistance to moisture penetration and severe frost action are desired).

1.2 The text of this specification references notes and footnotes which provide explanatory material. These notes and footnotes (excluding those in tables and figures) shall not be considered as requirements of the standard. Note 2—Concrete facing brick covered by this specification are made from lightweight or normal weight aggregates, or both.

Note 3—When particular features are desired, such as density classification, high compressive strength, surface textures for appearance or bond, finish, color, fire resistance, insulation, acoustical properties, or other special features, such properties should be specified separately by the purchaser. Suppliers should be consulted as to the availability of concrete facing brick having the desired features.

C33 Specification for Concrete Aggregates
C55 Specification for Concrete Building Brick
C140 Test Methods for Sampling and Testing Concrete Masonry Units and Related Units
C150 Specification for Portland Cement
C331 Specification for Lightweight Aggregates for Concrete Masonry Units
C426 Test Method for Linear Drying Shrinkage of Concrete Masonry Units
C595 Specification for Blended Hydraulic Cements
C618 Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete
C989 Specification for Slag Cement for Use in Concrete and Mortars
C1157 Performance Specification for Hydraulic Cement
C1232 Terminology of Masonry

3. Terminology

3.1 Terminology defined in Terminology C1232 shall apply for this specification.

3.2 Definitions of Terms Specific to This Standard:

3.2.1 concrete building brick, n—a concrete masonry unit, with a maximum width of four (4) inches and of a weight that will typically permit it to be lifted and placed with one hand, that is manufactured for general use in non-facing, utilitarian applications.

3.2.2 concrete facing brick, n—a concrete masonry unit, with a maximum width of four (4) inches and of a weight that will typically permit it to be lifted and placed with one hand, that is manufactured to be typically used in an application where one or more faces of the unit is intended to be exposed.

4. Materials and Manufacture

4.1 Cementitious Materials—Materials shall conform to the following applicable specifications:

4.1.1 Portland Cement—Specification C150.

4.1.2 Modified Portland Cement—Portland cement conformity to Specification C150, modified as follows:

4.1.2.1 Limestone—Calcium carbonate, with a minimum 85% CaCO₃ content, is permitted to be added to the cement, provided these requirements of Specification C150 as modified are met:

(1) Limitation on Insoluble Residue—1.5%.

(2) Limitation on Air Content of Mortar—Volume percent, 22% max.

(3) Limitation on Loss on Ignition—7%.

*A Summary of Changes section appears at the end of this standard.

4.1.3 Blended Hydraulic Cements—Specification C595.
4.1.4 Hydraulic Cement—Specification C1157.
4.1.5 Pozzolans—Specification C618.
4.1.6 Blast Furnace Slag Cement—Specification C989.
4.2 Aggregates—Aggregates shall conform to the following specifications, except that grading requirements shall not necessarily apply:
4.2.1 Normal Weight Aggregates—Specification C33.
4.2.2 Lightweight Aggregates—Specification C331.
4.3 Other Constituents—Air-entraining agents, coloring pigments, integral water repellents, finely ground silica, and other constituents shall be previously established as suitable for use in concrete masonry units and shall conform to applicable ASTM standards or shall be shown by test or experience not to be detrimental to the durability of the concrete masonry units or any material customarily used in masonry construction.

5. Physical Requirements
5.1 At the time of delivery to the purchaser, units shall conform to the physical requirements prescribed in Table 1.
5.1.1 When higher compressive strengths than those listed in Table 1 are specified, the tested average net area compressive strength of three units shall equal or exceed the specified compressive strength, and the following single unit strength requirements shall apply.
5.1.1.1 When the specified compressive strength is less than 5000 psi, no single unit net area compressive strength test result shall be less than the specified compressive strength minus 500 psi.
5.1.1.2 When the specified compressive strength is 5000 psi or greater, no single unit net area compressive strength test result shall be less than 90 % of the specified compressive strength.
5.2 At the time of delivery to the purchaser, the total linear drying shrinkage of units shall not exceed 0.065 % when tested in accordance with Test Method C426.

Note 4—The purchaser is the public body or authority, association, corporation, partnership, or individual entering into a contract or agreement to purchase or install, or both, concrete facing brick. The time of delivery to the purchaser is FOB plant when the purchaser or the purchaser’s agent transports the concrete facing brick, or at the time unloaded at the worksite if the manufacturer or the manufacturer’s agent transports the concrete facing brick.

6. Dimensions, Mass, and Permissible Variations
6.1 No overall dimension (width, height, and length) shall differ by more than ±¼ in. (3.2 mm) from the specified standard dimensions.

Note 5—Standard dimensions of concrete facing brick are the manufacturer’s designated dimensions. Nominal dimensions of modular size concrete facing brick are equal to the standard dimensions plus the thickness of one mortar joint. Nominal dimensions of nonmodular size concrete facing brick usually exceed the standard dimensions by ¼ to ½ in. (3.2 to 6.4 mm).

6.1.1 For those units with faces altered for aesthetic purposes, overall dimensional tolerances apply only to those dimensions not affected by the altering.

Note 6—For such units, dimensions will vary. Consult with suppliers to determine achievable dimensional tolerances.

6.2 For cored concrete facing brick, the net cross-sectional area in any plane parallel to the surface containing the cores shall be at least 75 % of the gross cross-sectional area measured in the same plane. No part of any hole shall be less than ¼ in. (19.1 mm) from any edge of the unit.

7. Finish and Appearance
7.1 All units shall be sound and free of cracks or other defects that interfere with the proper placement of the units or significantly impair the strength or permanence of the construction. Minor cracks incidental to the usual method of manufacture or minor chipping resulting from customary methods of handling in shipment and delivery are not grounds for rejection.
7.2 Where units are to be used in exposed wall construction, the faces shall not show chips or cracks not otherwise permitted or other imperfections when viewed from a distance of not less than 20 ft (6.1 m) under diffused lighting.
7.2.1 Five percent of a shipment containing chips, not larger than ½ in. (12.7 mm) in any dimension, or cracks not wider than 0.02 in. (0.5 mm) and not longer than 25 % of the nominal height of the unit, is permitted.
7.3 The color and texture shall be specified by the purchaser. The exposed faces shall conform to an approved sample consisting of not less than four units, representing the range of texture and range of color permitted.

8. Methods of Sampling and Testing
8.1 The purchaser or authorized representative shall be accorded proper facilities to inspect and sample the concrete facing brick at the place of manufacture from the lots ready for delivery.
8.2 Sample and test concrete facing brick in accordance with Test Methods C140 and Test Method C426, when applicable.
8.3 Total linear drying shrinkage shall be based on tests of concrete facing brick made with the same materials, concrete mix design, manufacturing process, and curing method, conducted in accordance with Test Method C426 not more than 24 months prior to delivery.

</table>

A Average oven-dry density, based on a set of three units, shall fall within ranges defined in the table to be classified as lightweight, medium weight, or normal weight.
9. Compliance

9.1 If a sample fails to conform to the specified physical requirements, the manufacturer shall be permitted to remove units from the shipment. A new sample shall be selected by the purchaser from remaining units from the shipment with a similar configuration and dimension and tested at the expense of the manufacturer. If the second sample meets the specified physical requirements, the remaining portion of the shipment represented by the sample meets the specified physical requirements. If the second sample fails to meet the specified physical requirements, the remaining portion of the shipment represented by the sample fails to meet the specified physical requirements.

Note: 7—Unless otherwise specified in the purchase order, the costs of tests is typically borne as follows: (1) if the results of the tests show that the units do not conform to the requirements of this specification, the cost is typically borne by the seller; (2) if the results of the tests show that the units conform to the specification requirements, the cost is typically borne by the purchaser.

10. Keywords

10.1 absorption; brick; compressive strength; concrete brick; concrete building brick; concrete facing brick; concrete masonry units; linear drying shrinkage; portland cement

SUMMARY OF CHANGES

Committee C15 has identified the location of selected changes to this standard since the last issue (C1634 – 09) that may impact the use of this standard. (Approved June 1, 2011.)

(I) Section 10 was revised.

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
